Gurunandan Anand

Senior DevOps Engineer

● +91 99529 82103 ● gurunandan555@gmail.com ● Chennai, India

PROFESSIONAL SUMMARY

A hardcore DevOps Engineer with 8+ years of IT experience, including 6+ years in DevOps and System Operations, and a proven track record across a wide spectrum of technologies, projects and clients.

Hands-on in all modern DevOps methodologies to manage speed, agility, and security, Code repository, Build Automation, Security into the software development lifecycle, Infrastructure automation, designing scalable infrastructure, Cloud management, ETL Operations, and Infrastructure as Code.

Worked in end-to-end System Operations, Linux server administration, Monitoring, System hardening, Web application Support and Troubleshooting, Batch scheduling, Firewall Management, and Network Security, enforcing best practices.

ACHIEVEMENTS

- Awarded a Cash Incentive of Rs. 50,000 by VastPRO Technologies Pvt. Ltd. (appreciation letter dated 2 June 2023, signed by the Director) for outstanding and exemplary performance in resolving critical production issues for customers from the 4th week of May 2023, including working 48 hours continuously on a couple of occasions.
- Recognised by the Director for dedication and commitment that helped retain customers as long-term partners.

EDUCATION

Bachelor of Science
Period: May 2015 – June 2020
University: Bharathiyar University, Coimbatore, INDIA 641046

Master of Business Administration (Systems Management)
Period: June 2021 – Nov 2024
University: Bharathidasan University, Tiruchirappalli, INDIA 620024

TRAINING & CERTIFICATION

- AWS Certified Solutions Architect - Associate 2025
- Microservices, Kubernetes, Service Mesh, CI/CD - 2025
- Informatica Power Center Administration - 2025
- Batch Processing with Spring Batch & Spring Boot - 2025
- AWS Cloud Practitioner Essentials. -2023

- Deep Dive with Security - AWS Identity and Access Management - 2025
- AWS Security – Encryption Fundamentals - 2025
- AWS Technical Essentials - 2023

SKILL SET

- Version Control - Git and SVN
- Web Server - Nginx, Apache2
- Application Server - Weblogic, JBoss, Apache-Tomcat
- Source Code management - GitLab, Bitbucket, AzureDevops, GitHub, JetBrains
- CI/CD – Jenkins, GitLab Pipeline, GitHub Actions
- Framework - ATG & Apache OFBiz
- Scripting - Bash, Groovy
- Build Tools - Gradle, Ant
- Load & Performance – Apache JMeter and Blaze Meter
- Compute - AWS, Azure, Google Cloud
- Infrastructure as Code - Terraform
- Operating Systems - Linux (Ubuntu, CentOS, Redhat, Oracle Linux), Windows
- DB - MySQL, PostgreSQL, OracleDB, DynamoDB, MongoDB.
- Content Delivery - Akamai
- ETL - Informatica Power Center
- Vulnerability Testing – Burp Suite, SonarQube
- Batch Processing- Control-M
- Log Monitoring – Data Dog, Splunk
- Containers - Docker
- Container Orchestration - Kubernetes
- Virtualization - OracleVM VirtualBox, VMware
- APM-based monitoring - New Relic, Dynatrace
- Cloud-Based Monitoring - Prometheus
- Service Desk - JIRA, Azure DevOps
- Collaboration - Office 365

WORK HISTORY

Organization: GAI TechWide Private Limited.
Role: DevOps Engineer
Period: Apr 2025 – Current

Location: Chennai, INDIA

Job Duties:

Google Cloud Administrator

- Provisioning, configuring, and managing App Engine(Serverless) in Google Cloud.
- Managing user roles, permissions, and cloud identity in IAM.
- Configuring and monitoring network architecture, including VPC, firewalls.
- Maintaining and optimizing cloud infrastructure performance, scalability, and cost-efficiency.
- Provision and manage Google Cloud resources (App Engine, IAM, VPC, and firewall rules) as code using Terraform.
- Maintain Terraform configurations in GitHub and run plan and apply through GitHub Actions workflows.
- Use Terraform to keep Google Cloud environments consistent and reduce manual configuration changes.
- Troubleshoot production incidents across App Engine, IAM, networking, and deployments, and apply fixes to prevent recurrence.

Vulnerability Assessment and Penetration Testing

- Conducting End-to-End Vulnerability testing in API's and Android applications.
- Simulating real-world attacks to allow teams to enhance their defensive strategies.
- Applying targeted security improvements derived from penetration testing results to minimize data breach risks.
- Making comprehensive assessment reports with actionable recommendations.

Source Code Management

- Administer and maintain Git repositories in GitHub.
- Manage repository structures, access controls, user permissions, and branching strategies across multiple development teams and projects.
- Implemented PR in GitHub.

Database Administrator

- Configuring Multi-regional deployments for DR purposes.
- Creating Backup policies on MongoDB and scheduling daily backups.
- Upgraded from Free Cluster to Paid Cluster for upgrading storage, IOPS, and connection scaling.
- Upgraded MongoDB 7.0 to MongoDB 8.0.

CI/CD and Deployment

- Develop and automate CI/CD processes using GitHub Actions workflows.
- Configure and manage GitHub Actions for build, test, and deployment stages through CI/CD pipelines.
- Work with Dev and QA teams to embed automated unit, integration, and security checks early in the pipeline, enhancing code quality and accelerating feedback loops.
- Facilitate seamless application rollouts by implementing progressive deployment methods such as blue-green, rolling updates, and canary releases for system availability and release support.
- Troubleshot and correct issues within CI/CD processes; introduced optimizations that decreased release failures and shortened delivery timelines.

SSL Security Certificate Management

- Responsible for verifying and keeping track of SSL certificates and renewals.
- Generate and install security certificates and PGP keys.
- Configure, deploy, verify SSL certificates, and troubleshoot issues.

Organization: VastPRO Technologies Pvt. Ltd.
Role: DevOps Engineer
Period: Oct 2020 – Dec 2024
Location: Chennai, INDIA

Job Duties (for multiple clients):

Web Server Management

- Install, configure, and maintain Apache, NGINX, IIS, and Tomcat to ensure high availability and performance of hosted web applications in AWS.
- Manage virtual hosts, SSL/TLS certificates, and domain configurations.
- Monitor web server performance, access logs, and error logs; proactively address bottlenecks, HTTP errors, and resource utilization issues.
- Implementing load balancing, reverse proxy, and caching mechanisms to optimize website speed, reliability, and uptime.
- Applying security best practices, including firewall rules, access control policies, vulnerability patching, and protection against XSS, CSRF, and SQLi web attacks.
- Maintaining documentation for web server configurations, SSL renewals, backup strategies, and incident response procedures.
- Worked on migrating all configurations from the Apache Web server to Nginx.
- Converted over 300 different types of rewrite rules from Apache server to Nginx.

AppServer Management

- Install, configure, and maintain enterprise-grade application servers, WebLogic, JBoss, and Tomcat, across Dev, Stage, DR and Production environments.
- Deploy and manage, and troubleshoot Java applications in Docker with high availability, optimal performance, and stability in AWS.
- Tuning JVM settings, thread pools, and connection pools to enhance application server performance and resource utilization.
- Monitor web application server logs, performance metrics, and availability using Prometheus, ELK, and Splunk.
- Managing application server clusters, load balancing, and failover configurations to support scalable and resilient architectures.
- Collaborate with development, middleware, and infrastructure teams to support application rollouts, troubleshoot runtime issues, and optimize performance.
- Creating scripts for uptime monitoring and cron jobs for sorting JAVA Application errors.
- Create incident tickets and work with teams to resolve the issues.

Container & Orchestration

- Install, configure, and manage Kubernetes clusters on AWS EKS.
- Build and manage Docker containers and images.
- Monitor and maintain containerized environments using Prometheus, Grafana, Lens, and ELK.
- Implement role-based access control, network policies, secrets, and secure image practices.
- Troubleshoot issues in container orchestration, runtime, cluster networking, and storage.
- Configuring cluster scalability, auto-healing, and zero-downtime deployment Process.

CDN Management

- Configure and maintain Akamai services, including CDN, WAF, and Bot Manager.
- Manage Akamai Property Manager configurations and ensure proper version control and deployment.
- Monitoring performance using Akamai reporting tools and logs.
- Troubleshoot issues related to traffic routing, security rules, SSL/TLS certificates, and caching.
- Optimizing content delivery through cache rules, compression, and offload strategies.

CI/CD and Deployment

- Designing, implementing, and maintaining CI/CD pipelines to automate build, test, and deployment processes using Jenkins, GitLab CI, and Azure DevOps.
- Automate deployment and configuration tasks using scripts and tools with Jenkins and scripts.
- Collaborating with Development and QA teams to integrate unit, integration, and security testing into pipelines, enabling shift-left testing and improving release quality.
- Supporting application releases and deployments with blue-green, rolling, for zero-downtime.
- Diagnose and resolve build, integration, and deployment issues; implement improvements to minimize release failures and reduce delivery cycle times.

Source Code Management

- Manage and maintain Git repositories in GitLab, Bitbucket, and Azure DevOps, ensuring version control practices are followed.

- Manage repository structures, access controls, user permissions, and branching strategies across multiple development teams and projects.
- Integrate Git with CI/CD tools with Jenkins, GitLab CI, and GitHub Actions to automate build, test, and deployment pipelines for different projects.
- Monitor repository health and activity, enforce commit policies, and resolve merge conflicts and repository issues.
- Support and maintain self-hosted Git server environments, including performance tuning, backup strategies, and security patching.
- Collaborate with development and security teams to ensure secure, reliable, and scalable source code management processes.
- Migrated over 100+ along with code commit history, tags from SVN to GIT source code management.
- Improved release management processes by introducing Git Tag for tracking changes throughout the software lifecycle.
- Conducted user training and created documentation on Git workflows (Git Flow, trunk-based development), best practices, and troubleshooting procedures.

Service Desk

- Created Boards and workflows in Jira, Azure DevOps.
- Responsible for configuring, maintaining, and improving Jira workflows, permissions, custom fields, dashboards, and plugin integrations
- Support project teams by customizing Jira for Agile, Scrum, Kanban, and other methodologies.
- Provide Jira training and documentation to end users and teams.
- Troubleshoot and resolve issues with Jira and related Atlassian products.

Batch Management

- Configure, create, and schedule batch processes in Control-M.
- Execute daily, weekly, monthly batches and ad hoc batches for operations teams as required.

ETL Administration

- Install, configure, and manage Informatica Power Center.
- Plan and upgrade Informatica and its components.
- Configure mappings, workflows, jobs, and ETL processes in Informatica PowerCenter.
- Manage Informatica Power Center services, users, and controls.

Linux Server Administration

- Manage, configure, and maintain Red Hat Enterprise Linux (RHEL), CentOS, and Ubuntu servers across production, staging, and development environments.
- Perform system updates, kernel patching, and package management using yum, dnf, and rpm, ensuring system stability and security compliance.
- Monitoring server performance, disk usage, memory, and CPU utilization using tools like top, htop, vmstat, and Nagios; proactively identified and resolved issues.
- Automate routine system tasks using Bash and Python.
- Manage user accounts, groups, permissions, and file systems, enforcing access control and hardening security settings per organizational standards.
- Configure and maintain services DNS, DHCP, NFS, FTP, SSH, and cron jobs, to support infrastructure and application needs.
- Implement and maintain firewall rules using iptables, firewalld, and SELinux policies to secure Linux environments.
- Conduct regular system backups and recovery procedures using tools like rsync, tar, and enterprise backup solutions.
- Implement security configurations including role-based access control, LDAP/AD integration, and vulnerability patching.
- Applying monthly security patching for Dev, Stage, and Prod environments.
- Providing Level 2/3 support for Linux server-related incidents, root cause analysis, and performance tuning for mission-critical applications.

Monitoring

- Configure monitoring tasks in Badboy, overseeing critical server processes and application components.
- Doing manual health checks for Services and server health checks using scripts.
- Set up, manage, and configure Splunk log monitoring.
- Analyze app and system logs from Splunk to check servers and services health daily.
- Analyze Splunk logs and reports to address critical Sev1 issues to find the root cause.
- Handled Sev1 and critical production incidents for multiple clients, leading troubleshooting and root cause analysis through to resolution, including continuous 48-hour support during critical customer issues in May 2023.
- Worked with development, middleware, and infrastructure teams during incidents and documented root cause and corrective actions.

Vulnerability Assessment and Penetration Testing

- Conduct end-to-end vulnerability assessments and penetration tests on web applications, APIs, cloud infrastructure, and endpoints to identify security weaknesses and attack vectors.
- Improve incident response times by simulating real-world attacks during penetration tests, enabling teams to refine their defense strategies.
- Reduce the risk of data breaches by implementing effective security measures based on penetration test findings.
- Provide detailed reports of assessment findings and recommended solutions, contributing to informed decision-making processes.

Load & Stress Testing / Performance Testing

- Design and execute load, stress, spike, endurance, and scalability tests to evaluate application and system performance under various conditions.
- Using Apache JMeter and Blaze Meter to simulate concurrent users and generate realistic traffic patterns.
- Develop custom performance test scripts to target APIs, web applications, databases, and backend services, analyzing latency, throughput, and error rates.
- Identify performance bottlenecks across infrastructure components (CPU, memory, I/O, database connections) and provide recommendations for tuning and optimization.
- Collaborating with teams to integrate performance testing into CI/CD pipelines and ensure continuous validation.
- Monitor system behavior during tests using Prometheus, Dynatrace, New Relic, and Cloud Watch for real-time performance metrics and alerting.
- Create comprehensive test reports detailing system limits, stability thresholds, and failure points, and provide recommendations to improve performance.
- Contributing to capacity planning efforts by estimating resource requirements based on load test findings and future growth projections.

Database Administration

- Administer and maintain Amazon RDS instances (MySQL, PostgreSQL, SQL Server, Oracle, etc.) in production, staging, and development environments.
- Responsible for creating schemas, managing roles, exporting/importing data, finding out long-running queries, hung sessions, etc. in PostgreSQL, Oracle DB, and MySQL.
- Managing database provisioning, configuration, performance tuning, and scaling to ensure optimal performance and availability.
- Streamline DB backup and recovery processes.
- Monitor database health using Cloud Watch, enhanced monitoring, and third-party tools.
- Handle routine maintenance tasks, including patching, upgrades, and parameter group configurations, while minimizing downtime.
- Train team members on best practices for database administration.
- Implement role-based access control and regular vulnerability assessments.
- Provide timely resolution of critical production issues, minimizing downtime, and avoiding potential revenue loss.

- Worked with a team to develop a Disaster Recovery plan to ensure business continuity in the event of failures and disasters.
- Worked on PostgreSQL Multi-master Replication for DR and Production Environment.
- Migrated Standard Oracle DB to AWS Oracle RDS.

AWS Administration

- Configure EC2, VPC, IAM, RDS, Application Load Balancer, Network Load Balancer, S3, and SNS.
- Configure network access control lists, security groups, and IAM roles.
- Provide training and mentorship to junior administrators on best practices for managing AWS infrastructure, including resource allocation, security configuration, and cost optimization.
- Configuring Elastic Load Balancers and Auto Scaling Groups to ensure high availability.
- Reduce downtime by designing and implementing backup and recovery strategies for critical data.
- Strengthen infrastructure security posture by regularly auditing configurations against industry standards such as CIS benchmarks or NIST guidelines within the AWS environment.
- Automate daily backups of critical data using AWS S3.
- Provision and manage AWS infrastructure (EC2, VPC, IAM, S3, load balancers, and RDS) as code using Terraform.
- Write reusable Terraform modules and variables to provision consistent Dev, Stage, and Prod environments on AWS.
- Keep Terraform code in Git with peer review, and keep state remotely, so infrastructure changes are tracked and repeatable.
- Run Terraform plan and apply through CI/CD pipelines (Jenkins, GitLab CI) to automate infrastructure changes.

Office 365 Administration

- Administer and maintain Office 365 tenant, including Exchange Online, Microsoft Teams, SharePoint Online, OneDrive for Business, and Azure Active Directory.
- Manage user accounts, groups, licenses, and permissions through the Microsoft 365 Admin Center
- Monitor service health, resolve incidents, and provide Tier 2/3 support for Office 365-related issues, ensuring high availability and performance.
- Implement and enforce security policies such as MFA, conditional access, and data loss prevention (DLP) rules to protect organizational data.
- Supported and led Office 365 migrations, including Exchange on-premises to Exchange Online and file server to OneDrive/SharePoint migrations.
- Create and maintain technical documentation, user guides, and support procedures for Office 365 services and features.
- Collaborate with internal teams to roll out new Office 365 features, optimize license usage, and train end-users.

Organization: Spintop Technologies Pvt. Ltd.
Role: Assistant System Analyst
Period: June 2018 – September 2020
Location: Chennai, INDIA

Job Duties:

Linux Server Administrator

- Provision and configure Linux servers (Ubuntu, RHEL & CentOS)
- Manage partitions, volumes, and filesystems (LVM, ext4, XFS, Btrfs).
- Troubleshoot OS, application, and network issues.
- Configure and manage NFS, SMB, iSCSI, and SAN/NAS systems.
- Configure and troubleshoot network interfaces, routes, DNS, and DHCP.
- Manage and monitor cron jobs for job scheduling and task automation.
- Configure firewalls (iptables, firewalld, nftables) and secure services in Linux.
- Manage SSH access and keys, configure sudo privileges and group policies, and implement MFA as required.
- Perform system updates, patch management, and SSL certificate updates.

- Perform vulnerability assessment tests and remediation.
- Develop and maintain shell scripts to automate routine system administration tasks such as log rotation, user account management, service monitoring, and backups.
- Reporting of critical system issues to Managers.
- Implement server hardening best practices, user access controls, and network policies in compliance with client security requirements.
- Maintain up-to-date documentation of systems and procedures.
- Respond to incidents and service requests.
- Restrict traffic using ingress/egress rules, port whitelisting, and service isolation.
- Configure and manage Fortinet, Cisco ASA, Sophos UTM, SonicWall, Juniper SRX, and WatchGuard firewalls and network security appliances for various clients.
- Configure and manage VPN and secure SSH tunneling for remote access.
- Manage over 150+ Linux servers (RHEL, Ubuntu & CentOS) for multiple clients.

IT Support

- Provide first and second-level technical support to end users for hardware, software, and peripheral issues.
- Install, configure, and maintain desktops, laptops, printers, mobile devices, and other IT equipment.
- Manage user accounts, access permissions, and group policies via Active Directory.
- Support remote users via remote access tools (e.g., TeamViewer, AnyDesk, RDP).
- Maintain inventory of IT hardware and software assets.
- Perform routine maintenance tasks and updates on user devices.
- Assist with onboarding and offboarding processes, equipment provisioning, and account setup.

Office 365 Administration

- Manage Office 365 tenant for multiple clients.
- Manage and configure user accounts, licenses, mailboxes, distribution lists, and permissions in Microsoft 365 Admin Center and Azure Active Directory.
- Manage and configure Office 365 services, Exchange Online, SharePoint, Teams, and OneDrive.
- Support email security, anti-spam, and data loss prevention (DLP) policies.
- Manage device policies and mobile device management (MDM) through Intune.
- Support user tickets and address user issues.
